IVIR LECTURE SERIES

“Effective AI regulation in the face
of global interdependence”
by Prof. Daniel Mügge

[Register here](#)

We are 

Speaker

Prof. dr. Daniel Mügge is Professor of Political Arithmetic at the UvA political science department. His current research investigates political dynamics surrounding fledging European AI regulation. In particular, he focuses on the EU's relationship with EU-external powers such as China and the USA ("EU AI diplomacy") and as well as multilateral and transnational AI standard setters. To support his work, NWO recently awarded him a Vici grant.

Details of the lecture

Date: 9 September 2022

Time: 16.00-17.30 CET

(Amsterdam)

Place:

- IViR Room, REC A, 5.24

- Online via Zoom

Please visit www.ivir.nl for more information and registration for this lecture.

Across the EU, stakeholders currently debate how artificial intelligence should be regulated, building on the 2021 Commission proposal for an AI Act. There is insufficient recognition, however, that both the shape and the effectiveness of a future EU AI regime will heavily depend on what other major regulatory powers will do—in particular the USA and China as the leading AI powers, but also international and transnational forums such as the OECD or the ISO/IEEE. Effective AI regulation needs to heed and accommodate the global political and technological force field in which the EU operates. During this IViR spreektafel Daniel Mügge will propose the central dimensions of regulatory interdependence that the EU confronts in the field of AI, and alternative scenarios for heeding them in a future regulatory regime.
